
VIDCOMPLY AI

The infrastructure layer for global distribution, governance, and compliance.

Global Governance: The Cost of Manual Multi-Market Review

Every title, language, territory and version multiplies the review workload.

- **Resource-Intensive Viewing:** Manual compliance viewing is the ultimate bottleneck, making it impossible to scale without adding massive headcount.
- **Human Bias:** Global guidelines require deep local knowledge. Human reviewers inherently apply subjective bias and frequently miss hidden cultural or political nuances, exposing the platform to regulatory risk.
- **The Multiplier Effect:** Clearing a single master for 15 different APAC and EMEA profiles requires operations teams to watch the same asset repeatedly.

One pass clears every market's profile and your own custom rules.

01

Single Run, Multiple Profiles

Political rules and general censorship, checked across every country profile at once.

02

Dynamic Censorship

Custom rules and severity thresholds that update instantly, catalog-wide.

03

Instant Results

400h / 24h
of content processed per day

04

Content Agnostic

Film, anime, posters, documents, and subtitles — one pipeline for all of it.

05

Language Agnostic

Visual, audio, and sound cues covered across 106 languages.

06

Custom Report Formats

EDL, Excel, JSON, or REST API — delivered in the format your pipeline expects.

Found in one click. Remediated with broadcast-grade precision.

Found and cleared automatically

License plates	Remediated
Phone numbers, in shot	Remediated
Signage and addresses	Remediated
Uncleared logos & brand exposure	Remediated

Non-destructively, as an editable layer — never burned into the picture.
Outputs: editable project + full render.

Advanced Blurring

CUT

BLUR

MUTE

Smart Audio & Cuts

Automated Clean Plates & Brand Obfuscation.

- **95% less** artist time versus manual paint-out, at broadcast delivery quality.
- Removals are tracked and built automatically - broadcast quality, no manual keyframing.
- Delivered back into the same workflow: a DaVinci, Premiere, or Avid project with editable nodes - never a baked, one-way render.
- Feed in the full 4K ProRes master. Cleanup

4K PRORES

H.264

Nuke

Adobe Premier

Built for high-volume ingestion, not one title at a time.

INTEGRATION PATHS

Browser & bulk upload	MANUAL
REST API & SFTP	AUTOMATED
Object-storage ingestion	AUTOMATED
Event-triggered flows & webhook write-back	AUTOMATED

ENTERPRISE SLA GUARANTEES

400	1K	200
Video Hours	Subtitle Files	Audio Hours

< 24 hours turnaround, per basic-tier workload.

Horizontal media workers scale independently with the workload. Parallel execution. Queue persistence and safe reprocessing mean a spike never drops a file.

Infrastructure under your existing tools

Nothing new for your departments to learn. Vidcomply runs underneath the systems you already operate and returns finished work as native project files.

Works with your pipeline

Avid, Premiere, DaVinci Resolve, Pro Tools, and Nuke. ProRes in, native project files out.

Parallel Cloud Execution

Cloud native. Results appear in the tools your teams open every day.

No destructive changes

We don't deliver burnt-in MP4s. We deliver standard Adobe Premiere (.prproj), DaVinci Resolve (.drp) and AAF audio files on top of the final render.

- Your teams keep their tool and full control.
- The repetitive work moves underneath.
- None-destructive editable changes.

API INTEGRATION

MAM MARKERS

Your masters never leave the building.

ZERO FILE TRAVEL

An **on-prem Desktop Hub** reads masters from your storage and generates low-resolution proxies locally.

The cloud Compute Array sees only those proxies — never the master — and returns lightweight coordinate data.

ZERO FILE TRAVEL

SOC 2 TYPE II

ENTERPRISE ASSURANCE MODEL

Identity & access

SSO/SAML, enforced MFA, least-privilege RBAC, IP allowlisting.

Content protection

TLS in transit, KMS at rest, isolated tenants, verified deletion.

AI data governance

No model training on your content. Approved subprocessors only.

Operational security

Audit logging, DR/RTO testing, incident response, escalation.

Independently assessed: AWS Well-Architected Review passed with zero high-risk findings. Subprocessors certified SOC 2 Type II / ISO 27001. TPN readiness package available on request.

Already running where standards are strictest

40%

of in-flight entertainment traffic, cleared through the multi-year partnership, where the most restrictive delivery environments in media.

Tier-1 studios run the same workflows

The identical cleanup, compliance, and audio passes on episodic and feature masters at delivery lock.

400 hours of content per 24 hours

Sustained production throughput, every delivery profile kept current.

SOC 2 Type II · Avid Technology Partner · NVIDIA Inception
